-  Communicate between hospital and community providers
-  Increase care coordination for high and rising risk
-  Improve efficiency of care in hospital

-  Increase preventive care
-  Decrease hospitalizations
-  Decrease ED visits
-  Increase care coordination
-  Increase community supports

MD Primary Care Model Considerations

- ▶ Provider types eligible for the model are traditional Primary Care Providers (internal med, family med, peds, geriatrics, general practice).
 - ▶ Additional request to include Psych Providers of Chronic Home Health Services.
- ▶ Performance Metrics will be incorporated in Year 1 to align CTOs with Practices
 - ▶ Metrics TBD, should be outcome-focused.
 - ▶ Eventually Metrics should align with State Population Health Goals
- ▶ State Population Health Goals will be defined
